## 5. Overzichtstabel werkzame elementen

| Werkzaam element (type actie dat karakteristiek is) | Voorbeeld van een actie   | Waarom leidt actie tot resultaat in de aanpak van eenzaamheid? (Wat is de werkzaamheid?)   |
|---|---|--|
| Bezigheden  | <ul style="list-style-type: none"> <li>- het aanleren van computervaardigheden in een groep (s13);</li> <li>- koorlidmaatschap met wekelijkse zangrepetitie (s23);</li> <li>- binnenshuis tuinieren (s111)</li> </ul>                         | <p>Iemand krijgt het gevoel zinvol bezig te zijn met een productieve activiteit of met vermaak. Hij of zij haalt voldoening en plezier uit het bezig zijn, waardoor de eenzaamheid minder zwaar weegt of men van de eenzaamheid is afgeleid.</p> <p>Daardoor vermindert de sterke van het eenzaamheidsprobleem, en ontstaat door de vergrote afstand tot het probleem ruimte voor een oplossing. Het doel van de activiteit is niet sociaal gericht. De activiteit kan individueel of in een groep worden uitgevoerd. Indirect kan de activiteit bijdragen aan betere of meer sociale relaties doordat iemand via de activiteit anderen ontmoet, contact ondersteunende vaardigheden aanleert, en ervaringen opdoet die contacten inhoud kunnen geven. Ook kan de activiteit leiden tot het gevoel 'er bij te horen' doordat een activiteit wordt uitgeoefend in een verband met anderen die dezelfde activiteit uitoefenen.</p> |
| Ontmoeten   | <ul style="list-style-type: none"> <li>- telefonische groepsgesprekken voor blinde veteraren (s35);</li> <li>- sociale media gebruiken om met anderen in contact te komen (s1);</li> <li>- deelnemen aan groepsbijeenkomsten (s90)</li> </ul> | <p>Iemand heeft de mogelijkheid sociale interacties te hebben of nieuwe sociale contacten aan te gaan. Iemand die in (een bevredigend) contact komt met anderen ontwikkelt gevoelens van erbij horen. Met het aangaan van contacten wordt het netwerk uitgebreid. Vaak zijn deze contacten in eerste instantie niet diepgaand of omvattend; vaak zijn ze eenmalig. Sommige contacten groeien na verloop van tijd uit tot een persoonlijk en betekenisvol contact. Ook kan een stap gezet worden naar instandhouding van het contact (ontwikkeling van een duurzame relatie), en daarmee tot een duurzame uitbreiding van het netwerk.</p>  |

| <b>Werkzaam element (type actie dat karakteristiek is)</b> | <b>Voorbeeld van een actie</b>   | <b>Waarom leidt actie tot resultaat in de aanpak van eenzaamheid? (Wat is de werkzaamheid?)</b>   |
|--|--|---|
| Praktisch ondersteunen                                     | <ul style="list-style-type: none"> <li>- huisbezoeken waarbij ondersteuning geboden wordt (s42);</li> <li>- telefonische peersupport (s45);</li> <li>- tijdens ergotherapiesessies training in het gebruik van hulpmiddelen en informatieverstrekking over 'community-based services' (s31)</li> </ul>   | <p>Iemand krijgt steun bij praktische zaken, en heeft daardoor het gevoel ingebed te zijn in een groter, zorgzaam verband. Als iemand weet dat hij of zij (laagdrempelig) om hulp kan vragen, draagt dat bij aan het gevoel er niet alleen voor te staan. Het betreft één of meer relaties gericht op praktische hulp en hoeft niet diepgaand te zijn. De hulp kan structureel of eenmalig zijn, en telkens door dezelfde of door andere personen worden geboden.</p>   |
| Betekenisvol contact                                       | <ul style="list-style-type: none"> <li>- groepsbijeenkomsten gericht op het creëren van een vertrouwensband met anderen in de buurt (s3);</li> <li>- telefonische 'befriending' service (s18);</li> <li>- vrijwilligers die als maatje op bezoek komen (s117)</li> </ul>   | <p>Het gaat om regelmatig, positief, en duurzaam contact met een persoon die voldoende om hem of haar geeft om tijd en energie in de relatie te steken. Het voelt als een vertrouwensband. Iemand ervaart een gevoel van herkenning, dat een andere persoon er voor hem of haar is. Daarmee wordt een gevoel van 'belonging' en geborgenheid gecreëerd: iemand staat er niet alleen voor. Om dit te bereiken, heeft de relatie diepgang en is de relatie persoonlijk: men kent elkaar van mens tot mens.</p>  |
| Sociale vaardigheden                                       | <ul style="list-style-type: none"> <li>- het oefenen van een gesprek in een rollenspel in de cursus 'Zin in vriendschap' (s98);</li> <li>- het volgen van wekelijkse sessies met individuele reminiscentietherapie (s20);</li> <li>- sessies waarin deelnemers leren hun eigen zorg te organiseren en de relaties met hun verzorgenden goed te houden (s28)</li> </ul> | <p>Iemand die zijn of haar sociale vaardigheden vergroot, gaat gemakkelijker een gesprek aan en is beter in staat een gesprek gaande te houden, waardoor contact makkelijker verloopt. Hij of zij kan relaties diepgang geven (bijvoorbeeld door goed te luisteren en ondersteunende reacties te geven) en problemen binnen relaties voorkomen en overwinnen. De persoon is zekerder van zijn of haar sterke punten, heeft meer zelfvertrouwen en ziet van zichzelf dat hij of zij het waard is om 'vriend' of sociale interactiepartner te zijn. Als dit gerealiseerd wordt, is verbetering van het netwerk gemakkelijker.</p> |

| <b>Werkzaam element (type actie dat karakteristiek is)</b> | <b>Voorbeeld van een actie</b>  | <b>Waarom leidt actie tot resultaat in de aanpak van eenzaamheid? (Wat is de werkzaamheid?)</b>  |
|--|---|--|
| Realistische verwachtingen                                 | <ul style="list-style-type: none"> <li>- cognitieve gedragstherapie (s122);</li> <li>- lesonderdelen gericht op het ontwikkelen van realistische verwachtgingen in de cursus 'Zin in vriendschap' (s98)</li> </ul>      | <p>Iemand met onrealistische verwachtingen over de mogelijke frequentie van contact, of over de snelheid waarmee een diepgaand of duurzaam contact ontstaat, wordt gauw teleurgesteld. Dit kan leiden tot negatieve interpretaties van het sociaal gedrag van anderen ('ze willen mij niet'). Hierdoor wordt het moeilijk nieuwe initiatieven tot contact te nemen en ontstaat de neiging zich sociaal terug te trekken. Dit leidt tot een toename van eenzaamheid. In staat zijn onrealistische verwachtingen bij te stellen, leidt ertoe dat iemand positieve ervaringen opdoet in sociale situaties en met relaties. Het is van belang rekening houden met verwachtingen van de ander: zijn of haar opvattingen over de wenselijke frequentie of inhoud van het contact, en de gepercipieerde mogelijkheden.</p> <p>Overvragen of zichtzelf wegcijferen, is geen goede basis voor een relatie. In training kan inzicht verkregen worden in het eigen gedrag dat tot negatieve gevoelens of ervaringen leidt. Vervolgens worden handreikingen geboden om positieve ervaringen op te doen en over teleurstellingen heen te stappen.</p> |
| Betekenisvolle rol   | <ul style="list-style-type: none"> <li>- programma waarin ouderen als pleeggrootouder optreden voor kinderen met ontwikkelachterstand (s83);</li> <li>- vrijwilligerswerk doen als maatje voor ouderen (s15)</li> </ul> | <p>Iemand die iets doet voor anderen (een persoon, organisatie of de samenleving) krijgt het gevoel dat hij of zij van belang is, er toe doet, en daarmee deel is van een groter geheel. Het vergroot het zelfvertrouwen en de zelfwaardering, waardoor iemand beter in staat is met zijn of haar situatie om te gaan. De band met een ander wordt versterkt als die ander zijn of haar erkenning en waardering uitspreekt. Dit kan persoonlijk zijn of algemeen zijn (bijvoorbeeld als positief gesproken wordt over het werk van vrijwilligers).</p>   |

## 6. Overzichtstabel interventiestudies

De gegevens zijn in een separaat Excel-bestand opgenomen.
